

Society Activities

Purpose

The SocietyActivities data-table holds data for a range of data-points relating to activities of the Societies and Zones KKFU work with. It is **achild data-table** which links to Societies.

It is a sister table to the "Projects" data-table, and is intended to be used to store data about activities such as gender training, literacy training and other work done by KKFU staff with Societies and Zones.

It includes data-fields such as "ActivityType", to list the type of activity which occurred, start and end dates.

A full listing of **all** the fields in the data-table with their purposes and any automation built into the App is laid out below. To fully understand the purpose of the data-fields please consult this.

NOTE: The SocietyActivities entity was added to KKSys in the 2010's used for a period of time. As IT staff have left the company it has since stopped being used. It is still present in KKSys, and can be used again by KKFU staff at any point.

How and when to access SocietyActivities

The edit form is accessible from the child data-entity on the KKSys System Entities screen, and is shown below.

SocietyActivities

Data-schema

Field- Name and Data-type	Description / Purpose	Possible Values	Coding / Automation
ID (Primary Key)	Unique number which identifies each record.		Automatically set by Orixia, not under the control of users or developers.

Field- Name and Data-type	Description / Purpose	Possible Values	Coding / Automation
