

MembershipDetails

Purpose

The MembershipDetails data-table holds data for dates on which farmers who KKFU work with have paid for or renewed their memberships. It is a **child data-table** which links to Farmers and Societies. It allows KKSys to record when farmer-members join or renew their membership to the co-op and the dues they have paid.

The MembershipDetails data-table includes data-fields for the basic values of Dues paid and the farmers cococa volume. A full listing of **all** the fields in the data-table with their purposes and any automation built into the App is laid out below. To fully understand the purpose of the data-fields please consult this.

How and where to access Membership Details data

The image below shows the "MembershipDetails" Edit Form. This is accessed via its own entry in the System Entities screen, or via the People or Societies it is linked to. MembershipDetails are a **child** of the People entity.

The screenshot shows a web-based form for editing MembershipDetails. At the top, it says 'Data for: MembershipDetails data'. Below this is a toolbar with various icons. The form itself has a header 'MembershipDetails: data ID: 540,027,638'. The fields are as follows:

Field	Value
FarmersID	View KOFI WIAFE (AS1-06-05-113)
SocietiesID	View Beposo AS1-06-05 (Active)
DateRenewed	01/09/2019
DuesPaid	2
Volume	0
DateCreated	14/07/2020 18:51:04
Current	<input type="checkbox"/>
AuthorID	GOTTFRIED BAIDOO

Membership Details edit form

Note that the layout of this edit form may have changed if it has been updated by your administrator, and additional actions, reports or resources may have been added.

How access to MembershipDetails works in practice in KKSys

Because large numbers of membership records must be added, together with other data relating to things like the Fields a Farmer owns, Dues they have paid to KKFU etc., automated systems have been built to enable staff to enter data into multiple entities simultaneously using **Rapid-data-entry-grids**.

To understand the more fully please consult the following links:

[Farmer Deliveries Rapid Entry Grid](#)

[Dynamic Pascal-Scripting in Orix: Adding a Resource to create Rapid-Entry-Grids in your App](#)

The existence of these Rapid data-entry grids does not remove any of the usual functionality of edit-forms within KKSys. All records that have been inserted automatically using a rapid-entry process can also be reviewed and updated in their edit-forms, and added to any reporting that management require.

Data-schema: full details of the data-fields and their purpose in the data-table

Field- Name / Data-type	Description / Purpose	Possible Values	Coding / Automation
ID (Primary Key)	Unique number which identifies each record.		Automatically set by Orixia, not under the control of users or developers.
FarmersID (Link-ID)	Links to the Farmers table	Selected from list by User	Will default to the currently open Farmers ID
SocietiesID (Link-ID)	Links to the Societies table	Selected from list by User	Will default to the currently open Societies ID
DateRenewed (Date)	Self explanatory	Set by Orixia, but can be overridden by user.	Default value: MembershipStartDate()
DuesPaid (Currency Value)	Self explanatory	Any number value	Default value: 0
Volume (Number)	The weight in kilos of cocoa the farmer has delivered in the year.	Any number value	Default value: 0
DateCreated (Timestamp)	Set to the exact date and time the record was first created.		Automatically set by Orixia, not under the control of users or developers.
Current (true/false)	Untick this field if the record is out-dated, no longer in use or discontinued. KKSys is programmed to untick this field for older records when a new one is added for the same farmer. This means there should only be one "Current" MembershipDetails record for each farmer.	True / false	Default value: true
AuthorID (Integer)	Self explanatory		Automatically set by Orixia, not under the control of users or developers.
