

Details of third party components used in the system

Orixa is built on a series of world-class coding. Code libraries used by the world's largest businesses have been leveraged into an application-development system that is designed to maximize end-user control and customization.

ElevateDB

Logo Elevate Software

Orixa Systems use the ElevateDB database engine. This is a fully SQL compliant database engine, which is commercial but open source. Developers pay for a license to the source code, with which they can build their own Applications. These can be distributed freely, without the need to pay additional database license fees on a per-user basis.

Fast Reports & Fast Cube

Logo Fast Reports

Fast Reports is a classic database reporting tool, designed to generate visualizations of data which can be displayed on screen, in PDF and paper-based formats. Orixa systems include a full integration with Fast Report, allowing users to extend and design their own reports, export them to HTML or PDF format and undertaken any customization or design extensions they may desire.
