

# Recently added and updates Orixia Features and Help Pages

If you are curious about new and updated elements in the Orixia system, please have a look at the following links.

We are regularly adding to and extending Orixia, the following links show some of the newer features and pages which have been edited or extended.

[Spreadsheet Editor: User Interface to hold Excel-spreadsheet-like data](#)

[Daily Activity Worksurface](#)

[The Orixia Token Edit Control](#)

["Exploring the "EditHistory" user-activity audit table"](#)

[The Resources Treeview: Accessing Resources and Reports](#)

[Using the "Resources" system-table to create reports, charts, data-cubes and dashboards](#)

[Decorating your table column definitions to add functionality to an App](#)

[Worksurfaces: Panels that show interlinked data in an intuitive way](#)

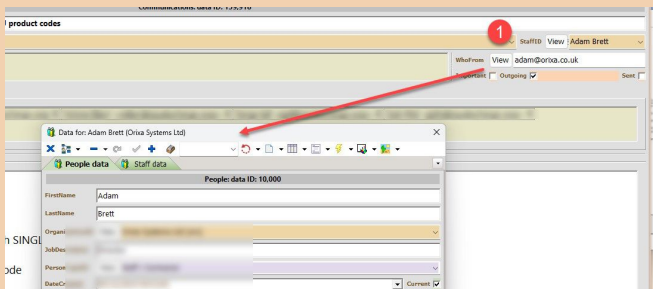

[Using Forecasts within an Orixia App](#)

[Using the "Resources" system-table to create PDF and Excel files](#)

[The Orixia "Memo" window for editing and viewing long sections of text](#)

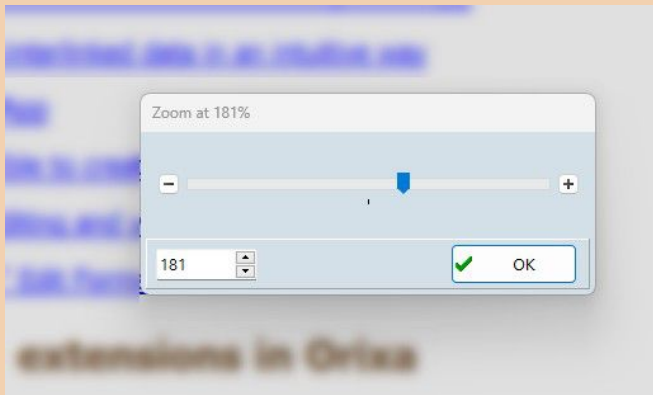

[The "Comments" and "FileNotes" Edit Forms](#)

## Some recent feature extensions in Orixia

"WhoFrom" Linkage

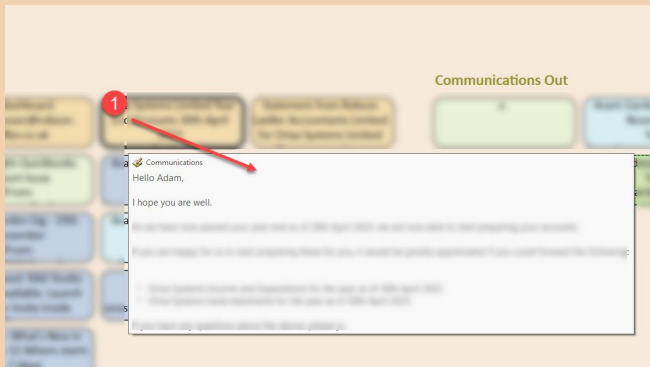

Lookup "View" button added to the "WhoFrom" field of Communications Edit Form

New Scaling / Zoom track bar control

Scaling of HTML Editor control is saved by the system, so users can set the Zoom to a size that works.

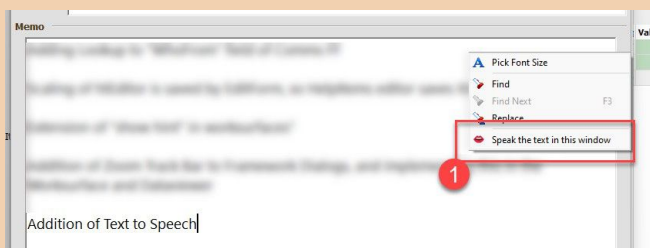

Similar "Zoom" features have been added to Worksurfaces and Dataviewers, standardizing how the user experience works across Orixia.

**New extensive "Hints" in work-surfaces**

Worksurfaces have been extended with a new "Hint" property which can be set by developers.

The text returned by Orixia is then displayed when the user hovers with their mouse over the control as shown at 1., in the image.

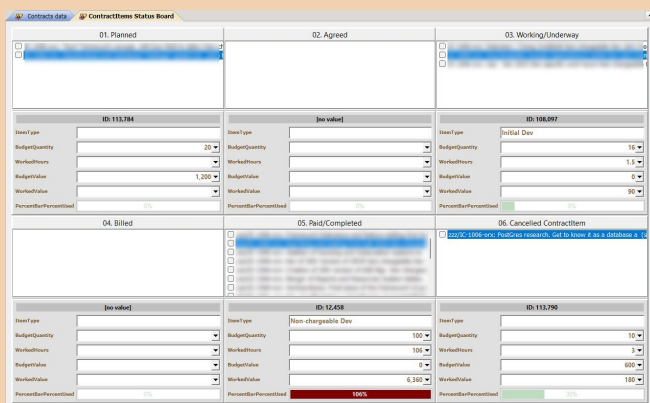

**Addition of "Speak Text" functionality**

Addition of "Text to Speech" feature in Memo Controls.

Any Memo control can now "speak" its own content. Right click with the mouse and select "Speak the text in this window" as shown at 1., in the image.

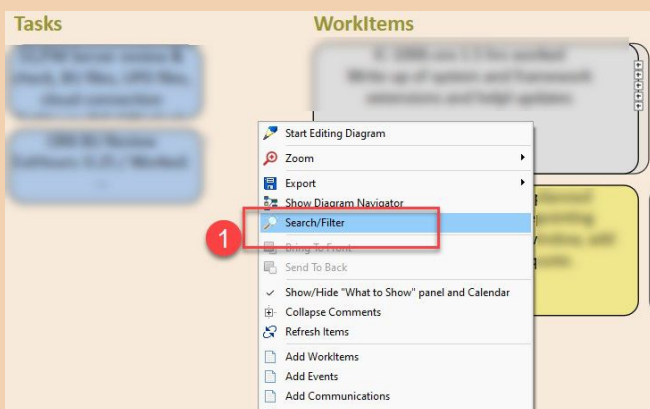

Note that if part of the text is selected prior to clicking, only the selected section will be spoken.

The playback speed of the speech can be altered by the user.

**Kanban / Status Board Control Fixed**

The Kanban Status Board component had a number of minor bugs. These were fixed enabling the component to work more fluidly.

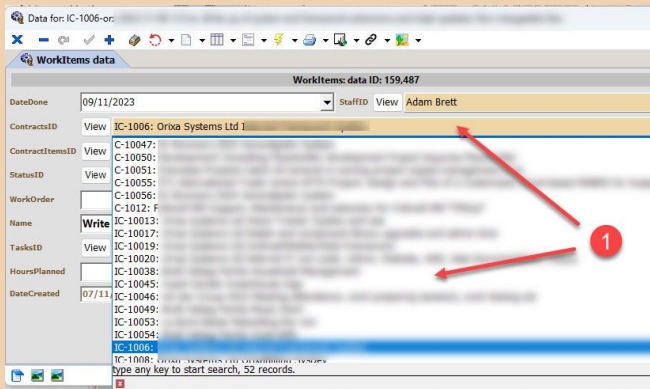

**Worksurface Search / Filter**

"Search" and "Filter" were added features to the Worksurface Control.

This allows users to location items if there are a large number present on the screen.

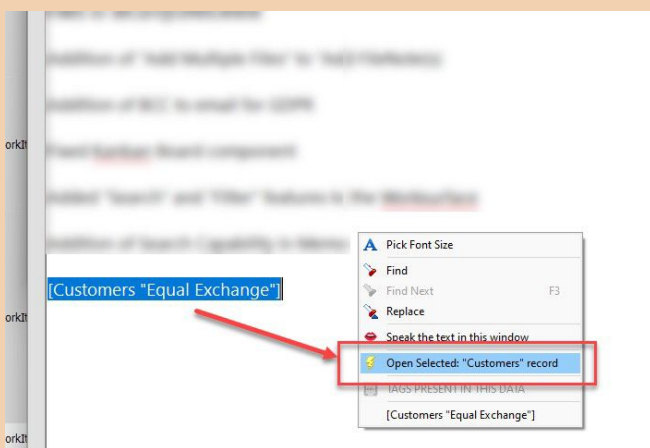

Search Capability in Memo has been improved.

TLS Security has been added to Email system.

Lookup List in Edit Form

IDList lookup functionality and speed has been improved. Larger lists should be returned more quickly and managed more fluidly in the application.

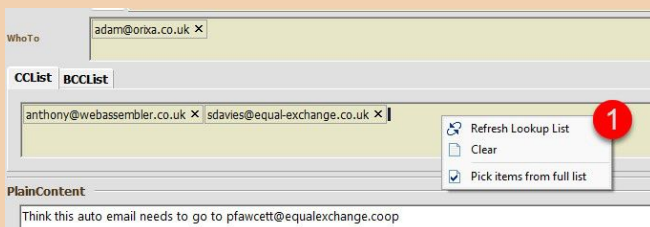

Memo, addition of linkages in text

Extension of Memo control to include "internal linkage" feature, allowing text in the memo to link to external Orixia data-records.

Examples using the TableName followed by either the Record ID or "Name" field enclosed in double-quotes.

Token Edit Control

Creation of new "Token Edit" Control

This allows for the creation of lists within an Orixia App which can be auto-completed in multiple parts, as seen in email sending applications.

The screenshot shows a spreadsheet control with a table. The table has columns A, B, and C. The data is as follows:

	A	B	C
1	Item	Stuff to do	Budget
2		1 Fix Gutters	£900
3		2 Replace front facing windows	£6,700
4		3 Repaint rear-facing windows	£1,200
5		4 Carpets in Loft	£8,250
6		5 Contingency	£880
7		Total	=SUM(C2:C6)
8			

A red circle with the number '1' highlights the formula '=SUM(C2:C6)' in cell C7.

Spreadsheet, cell formulae

Addition of "Spreadsheet" control with Excel-like capabilities

A spreadsheet can now be added to any Business Object Edit Form.
